

## **Coveme has invested one million US dollars to expand the research and manufacturing scale in China**

The PV backsheet supplier Coveme has revealed that in China this year has completed a major investment for the expansion of its research and green manufacturing scale in China.

It is reported that since mid-2014, Coveme began to move part of the R & D center to China in order to better serve customers in China and Asia, and significantly improve the competitiveness of local market.

The sales director of Asia PV division, said "green technologies and green production progresses, people's concern for the environment is also getting higher and higher. The Chinese government is now in the domestic large-scale guide innovation, as radiation foreign policy, we are actively committed to green production.

Coveme factory has been achieved fully automated and has all the equipment needed for clean production cycle system. Further, since the product is used in polyester materials, to ensure the technical performance of products, while fully recyclable after use of the product.

The recycling and green management of the PV modules is currently the big issues which attracted a great concern from world's industry and environment.

Coveme believes that the large-scale shipments of the PV modules every year, the low energy consumption, low pollution, economically viable recyclable materials and recyclable components, will become extremely important in the future.
