

Coveme Obtained JET Certification P

More JET Certification plan next year

Recently, Coveme is JET certified with its dyMat PYE 3000 and dyMat PYE SPV backsheet product.

JET certification is awarded from Japan Electrical Safety & Environment Technology Laboratories for the purpose of popularizing solar energy, ensuring performance, reliability and security of solar modules. Companies with this certification receive certain subsidies from the Japanese government. JET is awarded according to official certification standards for laboratory quality polyester material in the photovoltaic industry. Tests include : UV / partial discharge / Relative Thermal Index RTI / Comparative tracking index CTI / flammability rating / flame spread index / materials list. In addition , JET makes sure that the certified products meet the standards through regular factory inspections.

Coveme is the world's leading manufacturer of polyester film processing and conversion . Headquartered in Bologna , Italy . In 2011 Coveme opened its second production plant in Zhangjiagang City in order to serve better the Asian market.

Coveme is today is the only non-Chinese backsheet manufacturer a full operative production plant in Asia, guaranteeing high efficiency and high flexibility both in production and logistic services. Coveme is as well a front runner in R&D for Back Contact technologies and occupies the leadership position in the world. Coveme's film is also widely used in biomedical , automotive circuits , mechanical and electrical industries , high-performance labels, wind energy, radio frequency identification (RFID) and photovoltaic (PV) industries.

Recently Chinese domestic PV manufacturers compete to expand in Japan. Getting Coveme JET certification is a crucial step in the strategic development of the company . Mr. Fabio Menicanti, Deputy Director of Coveme China says, "Since dyMat PYE SPV and dyMat PYE 3000 got the JET certification for backsheet, Coveme managed to increase the market share of some most important customers in China which are involved in several projects in Japan. Moreover Coveme is working on two important projects with Japanese customers (one with PYE SPV and one with PYE3000) which couldn't have been possible without the achievement of the JET Certification. Coveme decided to

apply for its third JET certification for a new PET based backsheets that will be soon launched in the market. Coveme believes that achieving the JET certification for its main products was a mandatory step in order to further strengthen its position in the Japanese market and it is fully confident that this choice will help Coveme expanding its business in Asia.”
